Bull Guarantee Letter

Dear Bull Customer,

I have selected sound genetics for over 30 years of artificial insemination. Your bull should be above average on most measurable traits, with a below average birth weight.

All bulls will have passed a fertility exam by Dr. Bruce Tabke at the Marcus Iowa Vet Clinic.

All bulls have been vaccinated to suit the most discriminating cattleman. We recommend that you watch the bull to make sure he is willing & able to service your cows. We stand behind our bulls to be breeders; we don't guarantee against injury.

After your first breeding season (60 days), you should remove your bull from your cows and place him in an area where he can gain some weight before winter sets in. This is the single most important management tool to get the most years of service.

Thank you for choosing Weaver Ranches,
Brian & John Weaver
